EDITION

Operator edition | June 2026

AUDIENCE

All SentinelOps users

PURPOSE

Training, onboarding, shift-room reference

READ THIS FIRST

The path through SentinelOps

This manual follows the real operator flow. If you are unsure where to begin, follow the list below from top to bottom.

01

Sign in and confirm your lane.

Use Profile Settings when role, section, or schedule access looks wrong.

02

Read Dashboard before acting.

Understand posture, shift pressure, command thread signals, and handover summary.

03

Open the right checklist.

Use Dashboard for live work and Checklist Timeline for history, date, shift, or status review.

04

Join before you work.

Click Join Checklist when you are actively participating.

05

Read handover before executing.

Incoming notes explain risks and unfinished context from the previous shift.

06

Work each item honestly.

Use Start Working, Mark Complete, Skip Item, or Report Issue.

07

Write manual handover and promote follow-up.

Handover explains. Task Center owns durable work.

08

Finalize from evidence.

Complete Checklist only when the execution record tells the truth.

OPERATING TRUTHS

The simple rules underneath the system

One place for the truth

Live execution belongs in the checklist. Longer follow-up belongs in Task Center. Coverage belongs in schedule tools.

Every exception needs a reason

Skipping and reporting are allowed, but silence is not. The reason becomes audit trail and handover cue.

Handover is part of the work

The next operator must inherit decisions, blockers, risks, and unfinished follow-up in writing.

Close from evidence

A clean close and a close with exceptions mean different things. SentinelOps preserves both clearly.

OPERATOR CHECKLIST

Start correctly

Begin with orientation and presence. This prevents duplicated work, hidden access issues, and blind execution.

Profile Settings Identity and access

Role

Operator

Section

Assigned

My Schedule

Open

SentinelOps Manual

Available

01

Login, profile menu, and Profile Settings

Sign in and confirm your lane

Confirm that SentinelOps recognizes your role, section, schedule access, and theme.

Open Profile Settings if access looks wrong

1. Confirm your name and role in the profile menu.
2. Open Profile Settings when section, role, or schedule information looks wrong.
3. Ask an admin to fix placement instead of working around missing access.

If you cannot see a checklist, team, schedule, or user-management page you should own, stop and fix access first.

Dashboard Operational State

Command posture

Stable with watch items

Shift Radar

Afternoon pressure

Command thread

Handover Summary

02

Dashboard

Read the day before acting

Dashboard tells you what kind of operational day you are entering.

Start from Dashboard

1. Scan operational state and critical signals first.
2. Check Shift Radar to see where pressure sits.
3. Open the command thread or checklist that matches the active pressure.

Do not start in history when solving the current day. Dashboard points to live work faster.

Checklist Timeline

Filters first

Week

Specific Day

Date Range

Morning Shift

Completed

Afternoon Shift

In Progress

Night Shift

Completed With Exceptions

03

Checklist Timeline or Dashboard command card

Open the right checklist

Use the timeline for date, shift, status, and pattern review. Use Dashboard when the current live work already needs attention.

Open Checklist Timeline when you need history

1. Choose Day view for a known event.
2. Use Week or Date Range for repeated issues.
3. Open the exact checklist instance after filters narrow the story.

If the goal is execution, move into the live checklist. If the goal is review, stay in the timeline until the record is clear.

LIVE EXECUTION

Join, read handover, then work each item

Live Checklist Header controls

Progress

8 / 10 actioned

Team Members

3 online

04

Live Checklist header

Join before you work

Join when you are taking part in shift work. This keeps participant presence accurate.

Click Join Checklist

1. Open the live checklist.
2. Click Join Checklist if visible.
3. Confirm the Team Members panel shows your presence.

If you are only reviewing, you do not need to join. Join when your actions will change the record.

Handover Notes Priority and next action

Incoming

High priority note

Acknowledge before action.

Create Handover Note: what happened, what matters, what should happen next.

Add Handover Note

05

Right sidebar, Handover Notes

Read handover before executing

Incoming notes explain what the previous shift left behind.

Open Handover Notes

1. Open Handover Notes in the right sidebar.
2. Acknowledge incoming notes for your shift.
3. Keep Team Members nearby when coordination matters.

If a note describes unresolved risk, do not mark related work complete until the risk has been checked or promoted into Task Center.

Item Actions Choose truthfully

Start Working

Mark Complete

Skip Item

Report Issue

Reason or completion notes.

06

Item Actions modal

Start the item you are actually working

Open the item, select Start Working, add a note if useful, and confirm.

Click Start Working

1. Open the item card you intend to work.
2. Click Start Working.
3. Add start notes when another operator would benefit.

Start means active work, not intention. Do not start several items just to reserve them.

SUBITEMS AND EXCEPTIONS

Complete, skip, and report with clarity

Smart Subitem Modal

Step 3 of 6

Current subitem

Validate evidence and action result

Mark Complete

Skip

Report Issue

07

Smart Subitem modal

Work subitems in order

Subitems are the guided path inside a detailed item.

Use Start Working, Mark Complete, Skip, or Report Issue

1. Use Next or Continue to move through actionable subitems.
2. Mark Complete only when the subitem is done.
3. Use Skip or Report Issue with a clear reason when normal completion is not possible.

If any subitem is reported failed, SentinelOps requires a final verdict before the main item can be completed.

Item Actions

Clean completion

Completion notes

Optional evidence or timing

Mark Complete

08

Item Actions or subitem completion step

Complete clean work cleanly

Use Mark Complete when the item or subitem has been performed and no exception remains.

Click Mark Complete

1. Confirm the action was actually performed.
2. Add concise completion evidence when needed.
3. For items with subitems, complete all subitems before completing the main item.

A completed item should not hide skipped, failed, or unresolved work.

Skip reason

Exception record

Reason for skipping this item or subitem.
Example: dependency unavailable, not applicable for this shift, deferred by process.

Confirm Skip

09

Item Actions or subitem reason modal

Skip only when it is valid to skip

Skip when the step is not applicable, blocked by a valid condition, or deliberately deferred by the operating process.

Click Skip Item or Skip

1. Choose Skip only after deciding the step should not be completed now.
2. Write the reason in plain language.
3. If skipped work still matters later, add handover or create a task.

Skipping is not the same as resolving. It is an exception record.

Report Issue

Failure trail

Describe the issue: symptom, impact, evidence, timestamp, and immediate next action.

Report Issue

Add Final Verdict

10

Item Actions or subitem reason modal

Report issues instead of hiding failure

Report Issue when execution failed, evidence shows a real problem, the action is unsafe, or escalation is needed.

Click Report Issue

1. State what failed or what symptom was observed.
2. Include evidence, system names, timestamps, or impact.
3. After investigation, use Resolve & Complete or add final verdict when ready.

Do not convert a failure into a skip just to finish faster.

HANDOVER AND OWNERSHIP

Keep the next shift from guessing

Create Handover Note

Priority

Low

Medium

High

What happened, what still matters, and what should happen next.

Create Handover Note

11

Handover Notes panel and modal

Write manual handover while context is fresh

Manual handover notes are for unresolved items, risks, dependencies, evidence pointers, or decisions the next shift must understand immediately.

Click Add Handover Note

1. Choose a priority that matches urgency.
2. Write what happened, what still matters, and what should happen next.
3. Keep notes short enough to act on.

Use handover for shift context. Use Task Center when work needs a named owner, due date, or multi-day follow-through.

Task Center

Durable ownership

Personal

Assigned

Team

Overdue

Follow up failed check

Due today

Escalation evidence

Owner set

12

Task Center

Promote long-tail work into Task Center

When a checklist item becomes a responsibility beyond the current run, put it in Task Center.

Create or update a task

1. Open the correct lane: personal, assigned, team, overdue, or completed.
2. Create or update owner, due date, and context.
3. Reference the checklist item or handover note.

Handover explains; Task Center owns.

Complete Checklist **Final evidence check**

Actioned
10 / 10

Clean
8

Exceptions
2

Final status

Completed With Exceptions

Confirm Complete

13

Live Checklist header and Complete Checklist dialog

Finalize the checklist honestly

Managers and admins complete the checklist from the header once work is actioned.

Click Complete Checklist

1. Confirm every item is completed, skipped, failed, or otherwise actioned.
2. Review exception count in the dialog.
3. Confirm Complete, then download the checklist PDF if a record is needed.

If exceptions exist, the checklist should close with exceptions. That is transparency.

DECISION GUIDE

When to complete, skip, report, hand over, or finalize

Start Working

USE WHEN

You are actively taking responsibility for an item now.

DO THIS

Open item actions, choose Start Working, and add a short note if context matters.

EVIDENCE

The item moves out of pending state and participant engagement is visible.

Mark Complete

USE WHEN

The work was performed and no exception remains.

DO THIS

Choose Mark Complete and add concise notes when evidence or timing matters.

EVIDENCE

The item or subitem shows Completed with completion metadata.

Skip Item

USE WHEN

The step is not applicable, blocked by a valid condition, or deliberately deferred.

DO THIS

Write the reason, then hand over or create a task if follow-up still matters.

EVIDENCE

The reason remains visible and the checklist can close with exceptions if needed.

Report Issue

USE WHEN

Something failed, is unsafe, is unclear, or needs escalation.

DO THIS

Describe symptom, impact, evidence, and immediate next action.

EVIDENCE

The issue is retained as an exception and can require final verdict.

Add Final Verdict

USE WHEN

An item had skipped or failed evidence but is now ready to close.

DO THIS

Summarize the outcome, what changed, and why the item can be considered complete.

EVIDENCE

The verdict appears beside the completed item for audit and handover review.

Add Handover Note

USE WHEN

The next shift needs context, warning, dependency, evidence, or a decision trail.

DO THIS

Choose priority, write operational facts, and focus on what happens next.

EVIDENCE

Incoming and outgoing notes appear with priority and author.

WORKSPACE MAP

Use the right room for the right kind of work

Dashboard

Question: What is happening right now?

Read operational state, Shift Radar, command threads, and handover summary.

Checklist Timeline

Question: Which run, date, shift, or pattern do I need to inspect?

Choose All Time, Week, Specific Day, or Date Range, then filter by shift and status.

Live Checklist

Question: What work must be executed and recorded now?

Join, work items truthfully, keep handover notes and team presence current.

Task Center

Question: What needs accountable follow-up beyond this shift?

Use personal, assigned, team, overdue, and completed lanes for durable ownership.

Handover Notes

Question: What must the next operator know?

Acknowledge incoming notes, add outgoing notes with priority, resolve or promote notes as needed.

Templates

Question: How do we make repeated work easier next time?

Order items the way work naturally happens and publish only after reviewing operator flow.

Schedule and Team Management

Question: Who covers what, and when?

Choose planning horizon, read coverage, use patterns for recurring structure.

Network Sentinel and TrustLink

Question: What evidence proves service or pipeline state?

Read Signal, Timeline, Evidence, and pipeline stage state before taking control action.

CLOSEOUT CHECKLIST

Before you leave the shift

 All checklist items are completed, skipped, failed, or otherwise actioned.

 Skipped items have reasons that a reviewer can understand.

 Reported issues include symptoms, impact, and evidence pointers.

 Failed subitems have final verdicts before the main item is closed.

 Manual handover notes exist for unresolved risk, dependencies, or next-shift action.

 Durable follow-up work is captured in Task Center with an owner and due date.

 The Complete Checklist dialog outcome matches the real execution record.

 The checklist PDF is downloaded only after the checklist is closed.

SentinelOps gets easier when the record is truthful. Completed means done. Skipped means valid exception. Reported means issue trail. Handover means the next operator can continue without guessing.
