TRUSTLINK

Extraction source configuration

Choose the data sources used by the next extraction.

Where to go: /trustlink?tab=pipeline

Access and authority

Source configuration access and Admin role.

01 / Change IDC/DigiPay ingestion

Before you begin: Know the approved extraction route.

1. Inspect the current route

Read the IDC and DigiPay ingest controls and the current run's evidence.

2. Change the next route

Toggle the intended source. At least one source must stay enabled. Wait for the saved "Next extraction route" message.

3. Verify the next run

Inspect its stage outcomes and counts. The toggle does not retroactively rewrite an earlier run or artifact.

How to confirm success

The next extraction uses the intended enabled inputs.

Stop and check

Do not disable a source to hide a failed ingestion without business approval.

Something is blocking you?

Both sources cannot be disabled

Keep the required source enabled; the form deliberately rejects an empty route.
